

INSTALLATION AND OPERATION

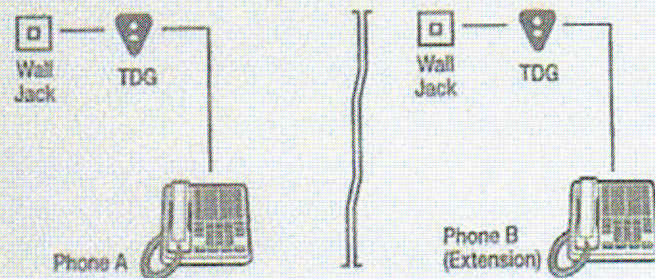

1. DETECT PHONE TAPPING AND EXTENSION EAVES-DROPPING

A) If installed per illustration, the extension with TDG installed can detect phone tapping and eaves-dropping.

B) When the TELE-DATA GUARD INDICATOR goes off during phone conversation, that means someone is tapping or listening from other extension without TDG installed.

2. PRIVATE PHONE PROTECTION

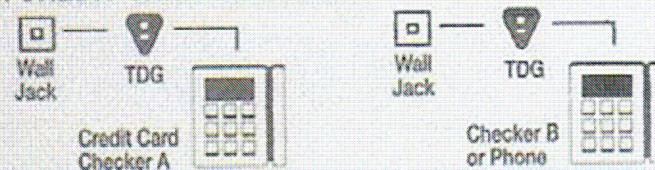

A) If installed per illustration, only phone A or B can access to the phone line based on "1st come, 1st served"

B) The lighted TELE-DATA GUARD INDICATOR tells (a) phone conversation is safe, or (b) the phone line is available to use when you pick up the phone.

C) If INDICATOR turns off during phone call, it notifies that your call has been intruded.

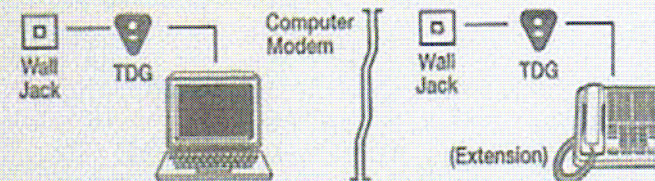

3. CREDIT CARD CHECKER

A) Two or more credit card checkers can share a phone line without interference.

B) When one checker is in use (less than 30 sec), other checkers cannot interfere the process. Other checker can be used only when TDG's INDICATOR is lighted.

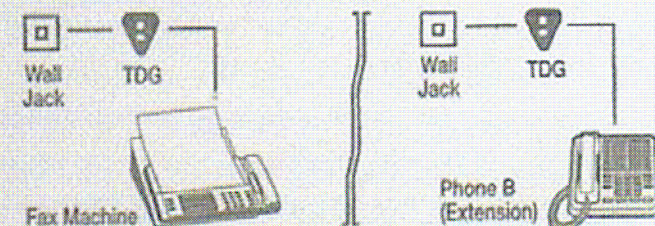

4. COMPUTER MODEM PROTECTION

A) When any extension and computer modem installed with TDGs per illustration, the data transfer of your modem is secured.

B) All extensions with TDGs are cut off temporarily when modem is in use.

5. FAX MACHINE PROTECTION

A) If installed per illustration, all extensions are cut off temporarily during FAX transmission or reception. The TDG's indicator stays dark when you pick up the phone.

B) you are no longer to hear any FAX data noise or to interfere FAX transmission or reception.

6. BY-PASS PUSH BUTTON

This By-Pass Push Button is on the front of the TDG unit. When someone is tapping your phone or eaves-dropping from other extension during your phone conversation, the TDG's indicator will go off. Then you can push and hold the By-Pass Push Button to resume your phone conversation.
